

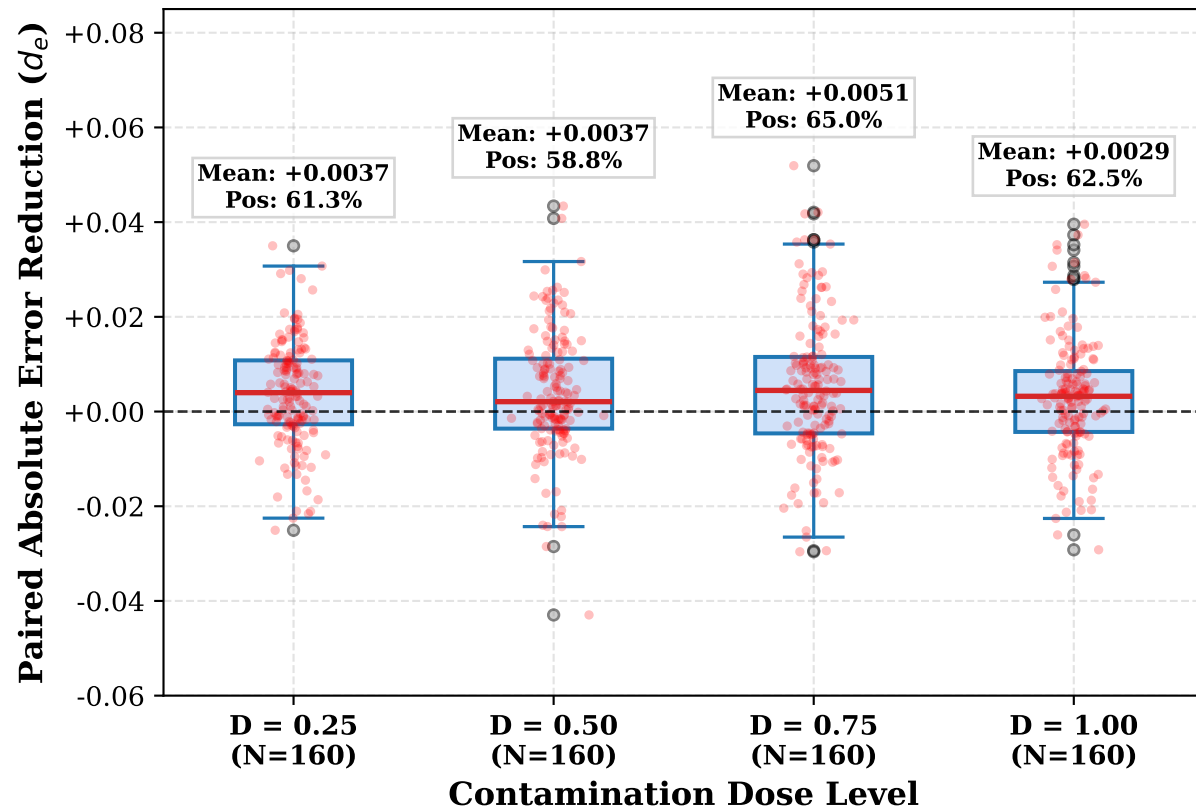

Figure 3: Distribution and Heterogeneity of Out-of-Sample Event-Level Effects (Post-Hoc Descriptive)

(A) Event Error Reductions by Contamination Dose

$(d_e = |y_e - \hat{y}_{\text{clean}}| - |y_e - \hat{y}_{\text{leak}}| > 0 \rightarrow \text{Improvement})$

(B) Event Heterogeneity Across 32 OOS Meetings

(23 / 32 Meetings Show Median $d_e > 0$)
